Foothills Forest Products (FFP) is located 20 KMS south of Grande, Cache, Alberta. We are a value added forest products company specializing in dimension lumber, wood pellets, and other value added wood products.

FFP began operations in Grande Cache with the purchase of the closed Weyerhaeuser sawmill. Over \$ 10,000,000 has been invested to date to transform the commodity producing sawmill into a value-added forest products facility.

Currently, FFP employs 200 people, produces 100 MMFBM of dimension lumber and 15,000 tons of wood pellets. In March of 2009 we commissioned our newly constructed panel plant located on the same site.

By drying our sawmill residue we plan to increase our pellet production to 40,000 tons and eliminate the need to operate our bee-hive burner. As the economy recovers and markets stabilize we plan to add shifts and increase production in the panel plant.
